Profile

I am a Junior Front-end Interactive Developer with 2 years professional experience. I have developed Ad Banners Blogs, and Landing Pages using technologies such as HTML5, CSS3, JavaScript, Bootstrap, Greensock.js, WordPress, jQuery, and others. Seeking a junior level position in which I can utilize my current skills while continuing to learn and grow. My strengths lay in turning pixel perfect designs into fully scalable, responsive applications that can be viewed on various screens and devices. I work well within standards and like to see green checkmarks in validators. HTML5, CSS3, WordPress, JavaScript, and JS Libraries, (jQuery, Greensock, Handlebars), are where I currently stand the strongest, with other front-end technologies and libraries close behind. Professional client work includes: Toyota, Hennessy, Chase, Dixie, Johnsonville, Quilted Northern, Air Wick, Smart Water, Overwatch, Google, Point and others.

Skills - Stack

- Developed Ad Banners using HTML5, CSS3, JavaScript, jQuery and Greensock.js in all standard sizes, while maintaining web standards and compliancy.
- Familiar working in big agency environments in correlation with design, development, and production teams.
- Ability to track: changes for iterations, time tracking software for billing, and delivery servers for latest updates.
- Broad experience developing with The Mac Operating System.
- Ability to work within content management systems such as, WordPress and SquareSpace.
- Began using WYSIWYG editors such as Dreamweaver and quickly adapted to using more robust coding software such as Sublime Text 2 and most recently Atom.io by github.
- Worked primarily in the Mac OS environment, with supporting software including: Terminal, Git version control systems, MAMP, FileZilla, Sequel Pro, and MS Office Suite.
- Ability to take design compositions, and pull images and assets for developing purposes from Photoshop.
- Web Portfolio and Code Samples: http://www.riotmind.nyc/riot_man/

Projects

Professional: *Johnsonville Ad Banners – Ad Campaign 2015*

- Developed several Mobile, Static, and Desktop Ad Banners using HTML5, CSS3, and Greensock.js front-end technologies. Sizes ranged from largest 970 x 90 to mobile 300 x 50. Banners were optimized by using svg's vs. jpegs and by using flat directory structures. Met Google file size standards by using compression software and code compression. Files for this campaign and others can be downloaded, and viewed from my github page: https://github.com/AdrianSane/projects

Professional: Google Pixel Launch Campaign – Ad Campaign 2016
- Created multiple banner ads for Google's Pixel Phone launch. Used JavaScript animation methods with Greensock.js, HTML5, CSS3 to create animated banners to be used by publisher sites including YouTube, CNN, and others. Sizes included 300 x 250, 160 x 600, 970 x 250 and others. Files for this campaign and others can be downloaded, and viewed from my github page: https://github.com/AdrianSane/projects

Personal: Riot Mind Studios – Blog / Ecommerce / Small business 2016
- Built a personal blog and ecommerce site on the WordPress platform. Integrated plugins and custom coded css for mobile responsiveness. Added social media plugins, mail signup forms, SEO optimization and, monetization to the site using Google Ad Sense. All merchandise and designs were custom created using Adobe Photoshop. View the site: http://www.riotmind.nyc/

College Projects: 2011 - 2015
- Other projects, personal, and *collegiate experience* included the following technologies: JavaScript frameworks, (create.js, reveal.js, jQuery.js, jQueryUI.js, modernizr.js, sizzle.js, Bootstrap, lightbox.js, angular.js, etc.), HTML5 – Canvas, Ajax, Object Oriented Programming, Model View Controller Frameworks, XML, API's, JSON, API's. WordPress and sql database management.
